## FAQ: Excel 2007 Dashboards and Reports

### Q1: What is the difference between a dashboard and a report in Excel 2007?

A1: A dashboard provides a high-level overview of key performance indicators (KPIs) using charts and summary data. It's designed for quick understanding and monitoring. A report, on the other hand, provides a more detailed analysis of specific data points, often including more granular details and supporting evidence. Think of a dashboard as a car's instrument panel – showing vital information at a glance – and a report as a detailed service history.

**Q2: Can I use Excel 2007 for large datasets?**

A2: While Excel 2007 can handle large datasets, its performance might degrade with extremely large files. For datasets exceeding several hundred thousand rows, consider using a database management system (DBMS) or specialized data analysis software. PivotTables can significantly help manage larger datasets within Excel's limitations.

**Q3: How can I improve the visual appeal of my dashboards?**
